### Additional Information Required For Water Well Drilling Permit

*If the proposed well is considered “non-exempt” from current regulations, the General Manager of the District may need additional information from the applicant before issuing a permit. This information **may** include, but may not be limited to, the following:*

§3.11(b) (1) (B): If the applicant is other than the owner of the property, documentation establishing the applicable authority to construct and operate a well for the proposed use will be required.

§3.11(b) (1) (I): A copy of the current water conservation plan, if the applicant is required by law to have a water conservation plan, will be submitted to the District.

§3.11(b) (1) (J): A drought contingency plan, if the applicant is required by law to have a drought contingency plan, will be submitted to the District.

§3.11(b)(2)(A-F): If the water is to be exported out of Nolan County, and is not considered an incidental amount under District Rules, a detailed statement regarding the location of the proposed receiving area for the water to be exported; the nature and purpose of the various proposed uses in the receiving area and the amount of water to be used for each purpose; information regarding the projected effect of the proposed exportation of water on aquifer conditions, depletion, subsidence, and existing permit holders and other groundwater users within the District; a copy of the proposed plan to mitigate and adverse impacts of the proposed export on groundwater users within the district; a description of how the proposed export is addressed in any approved regional water plan; and a technical description of the facilities to be used for transportation of the groundwater and a time schedule for construction thereof, will be required before any drilling permit will be issued.

§3.11(c): Hydrogeological Report. An applicant for a new well, other than a replacement well, or an applicant for permit renewal for a well that has not previously been the subject of a hydrogeological report, that involves the export of groundwater out of the District or the production of more than 1000 acre-feet of groundwater annually, shall submit to the District a current hydrogeological report addressing the area of influence, drawdown, recovery time, and other pertinent information required by the District. The well must be equipped to test for its ultimate planned use and the hydrogeological report must address the impacts of that use. The hydrogeological report shall be prepared by a qualified person who is properly licensed by the State of Texas to prepare such report. The report shall include hydrogeologic information addressing and specifically related to the proposed water pumpage levels at the proposed pumpage site. Applicants may not rely solely on reports previously filed with or prepared by the District. The report must be submitted within 120 days of the date the permit is granted, and failure to submit a hydrogeological report as required by the District is a violation of these Rules and shall be grounds for cancellation of the permit. The Board shall make the final determination of whether a hydrogeological report meets the requirements of this subsection.

§3.11(d): This application must be accompanied by the application processing fee, inspection fee, or other fees as appropriate. Such fees must be paid before the application is declared administratively complete. Application processing fees are non-refundable. *Currently, there are no fees applied to applications.*
